

# iFlex Single Car Park Barrier

Designed to shield ramps, perimeters, entrance and exit points, walls and walkways from damage caused by vehicle collisions both inside and out.

Certified to EN1991, BS6399 and BS6180/DETR, the flexible car park barriers significantly reduce costs by absorbing and dissipating impact forces before fully reforming, meaning floors are protected, barriers do not need replacing and vehicle damage is diminished.

The unique material is non-scratch, non-corrosive, water resistant, self-coloured and UV stabilised, reducing the need for maintenance and guarding against sunlight degradation.

## Product Benefits

### Car park compliant

Compliant with car-park specific standards, including: EN1991, BS6399, BS6180/DETR.

### Preserved floors

Unique patented coupling system dissipates impact forces, preventing damage to floors.

### **Maintenance free**

Non-corrosive, non-scratch, non-repaint, water resistant, self-coloured and UV stabilised for minimal maintenance.

### **Reduced repair costs**

MEMAPLEX™ material flexes, absorbs and reforms repeatedly upon impact, preventing the need for replacement.

**A wide range of uses**

## Product Applications

### **Car Protection**

Heavy-duty Car Park Barrier absorbs shock, reducing the damage to vehicles on impact.

### **Structural Protection**

Maintain the structural integrity of your car park to minimise maintenance and damage costs.

### **Driver Guidance**

iFlex Car Park Barrier provides a clear visual guide for drivers, providing protection where it's needed most.

### **Impact Absorption**

Energy-absorbing material dissipates impact forces through the barrier – reducing damage to floors and vehicles, and avoiding repairs.

## Best in class perimeter protection for luxury Lexus car park

A-SAFE's dedicated car park impact barrier was recommended for installation at a UK Lexus dealership, with the aim of providing an impact absorbing solution.

 Car Park  Automotive

### Customer:

Japan's largest-selling premium vehicle brand Lexus is the luxury vehicle division of Toyota, marketed in over 70 countries and territories worldwide.

### Situation:

A UK dealership team required a safety solution to shield the site's car park and brand new Lexus vehicles within it. The high level car park needed barriers that could withstand vehicle impacts and provide edge protection around the perimeter of the space. Ideally, the solution would also deter thieves and youths from accessing the car park.

### Solution:

A-SAFE installed Single Car Park Barrier to define the edge of the car park and ensure a protected, designated space for vehicles. Even if a vehicle did impact the barrier, the flexible, absorbent nature of the material is designed to cushion the impact and avoid damage.

Our car park barriers are purpose designed for high traffic car parks and certified to BS6399 — creating a safer place to park.
